

South Asia Human Security Series

Human Security in India

Discourse, Practices and
Policy Implications

Mahendra P Lama

The present volume examines the case for broadening the scope of security by breaking the rigidity brought about by traditional forms of dominant state-centric and military based security concepts and their determining matrices.

The main thrust of this study is on three very critical areas, viz., (i) environmental security, (ii) food security and (iii) energy security. It deals with how gains from effective management of human security parameters get translated into enhanced security both at the macro and micro levels.

In doing so, the study endeavours to unfurl a new framework of concerns, complexities and constituents of human and national security linkages. This enhances the possibility of arriving at a collective and comprehensive notion of security on a national and sub-national basis, away from state-centric and threat perception-dominated determinants of security.

This book should help experts and scholars of security issues understand new dimensions of national security and should this happen the book will have made a major contribution in the study of security issues.

South Asia Human Security Series

South Asia Human Security Series is the product of a three-year regional collaborative research project titled, *Human Security in South Asia: Discourse, Practice and Policy Proposition* conducted by BIISS under the aegis of the Ford Foundation, New Delhi, 2003-06. The aim of the project has been to provide an understanding of the prevailing discourses and practices on human security in South Asia as well as to generate inputs for policy making at regional and national levels. Five individual country papers on Bangladesh, India, Nepal, Pakistan and Sri Lanka and five thematic areas: (a) Constructing a Human Security Index for South Asia; (b) Violence, Terrorism and Human Security; (c) Ethnicity and Human Security; (d) Gender and Human Security; (e) Marginalisation and Human Security – were covered. The outcome is the present series.

The Bangladesh Institute of International and Strategic Studies (BIISS)

The Bangladesh Institute of International and Strategic Studies (BIISS) is an autonomous research organisation under the Ministry of Foreign Affairs, Government of Bangladesh. The Institute was founded in 1978 to undertake research and promote deliberation on foreign policy, security and development. The Institute publishes regularly a quarterly Journal, *BIISS Journal*, organises seminars/conferences and undertakes research projects. More about the Institute at: www.biiss.org

Preface

This volume is part of a larger "BIISS-Ford Foundation Collaborative Research Project" on *Human Security in South Asia: Discourse, Practice and Policy Proposition*. This volume starts with a fundamental question as to what makes people feel insecure. Ingrained in this question are the complexities of sources of insecurity among human population in various situations and locations. This question also confronts orthodox account of security on its inadequacy in understanding and assessing actual nature and scale of threats to human security. Precisely on this ground, central premises of orthodox account and constituents of security have been constantly challenged and alternative discourses and conceptual underpinnings are gradually emerging. Orthodox security analysis neglects wider meaning of security as it assumes international system to be fundamentally anarchic and considers international politics and domestic system mutually exclusive. Under these premises, threats are targeted directly to sovereignty of the state as represented in territorial integrity, thereby making state as a primary referent object. Here, the state-society relationship is separated from the international relations. Domestic realm becomes exclusive.

Another way to look at it is to ask a question as to what makes people feel secure. The intrinsic feeling of security both at the individual and community levels emanate from meeting of things that people cherish most including food for the family, shelter, good health, protection from violence both inflicted by men and nature, non-oppressive states and freedom from pervasive threats to people's rights and safety of lives. This feeling of security in a way determines the state of human and national security. The core element in this framework of human security leading to national security is that the human beings are considered as the primary referents.

How Relevant are these Emerging Concepts to India?

India has been a theatre of major security concerns. However, much importance has been consciously placed on the traditional military

based security issues despite the fact that the concerns and vulnerabilities are both at federal and local levels and the security threats increasingly and overwhelmingly relate to non-traditional paradigms. In fact, at the heart of 'national' security concerns is the deplorably poor state of human security directly related non-military threats like livelihood, human rights violations, conflicts and natural disasters and even the market led disparities. However, in India also the state has been a referent object of security and threats are only variants of orthodox-external dimensions. There is a huge distance between internal security (largely impinging upon human security) and national security (mostly triggered by external forces). Why this fine distinction between a communal riot-led or Maoist violence-led "internal security" threat and Kargil intrusion-led "national security threat"? The former is a non-traditional and the latter a traditional security threat. Both have strong human security components. What stops us from recognizing the former also as a national security threat? What is the distance between 'internal' and 'national' here? Where is the meeting point? In the answer to this question lies a solution to these complex issues of the orthodox (military) *versus* non-orthodox (human) paradoxes of security.

There are serious constraints in India in changing contours of security and bringing in human security discourse upfront juxtaposing with the orthodox account. There have been attempts by scholars and institutions across the country to do this. However, conceptual acceptance and empirical applicability is yet to make any dent. There is strong state led institutional resistance. Task ahead is both challenging and novel. This is despite the fact that security has assumed wider connotations going beyond borders. Seventeen provincial states of India (out of 28) have international land borders and their interactions across the border are fast becoming critical and complex far beyond the orthodox military perspectives. In some sense, security dimensions are becoming more local than national.

Given the above contexts, basic objective of this study is to examine the possibility of broadening the scope of security dynamics by breaking the rigidity injected by the traditional forms of dominant state-centric security concepts and its determining matrices. This is being done mainly by drawing knowledge, experiences and practices of various human security related issues, actions, formal and informal institutions and social and spatial consideration. The effort here is to

relate security to the more positive aspects of human and other wider dimensions of security in India.

It is in fact happening in a subtle but substantive way. Human development approach to development has been discussed widely. A number of research projects on human security related issues are being conducted across the country. A parallel discourse among the hard-core military strategists and strategic writers on the sweepingly changing yet integrated nature of external and internal security threats has been going on. The core issues are now emerging to be food, environmental and energy security which have very strong human and national security contents. This volume endeavours to bring in theoretical, conceptual and some empirical underpinnings upfront both at macro and micro levels and to examine how they fit into the Indian context.

The author gratefully acknowledges the strong institutional and intellectual support extended by Dr. Abdur Rob Khan, former Research Director, Bangladesh Institute of International and Strategic Studies (BIISS) and Mr. A.K.M. Abdus Sabur, Research Director, BIISS. This study would not have been possible without the funding support from the Ford Foundation. In fact, I had the great privilege to be associated with other two non-traditional security projects located in South Asia and funded by the Ford Foundation.

The author expresses his deep sense of gratitude to the following scholars, experts and institutions for extending research support, comments and suggestions towards conducting the present work: Dr. Vimal Khawas, Centre for Political Geography, Jawaharlal Nehru University (JNU), New Delhi; Dr. Nawal K. Paswan, Assistant Professor, Central Asian Studies Division, JNU; Prof. Meghna Guha Thakurata, Executive Director, Research Initiative Bangladesh; Prof. I.N. Mukherji, JNU; Prof. Pervaiz Iqbal Cheema, Director, Islamabad Policy Research Institute, Pakistan; Major General Mohammad Abdul Matin, former Director General, BIISS; Prof. Muzaffer Ahmad, Prof. Tasneem Siddqui, Prof. C.R. Abrar and Prof. Ataur Rahman, Dhaka University; Prof. Monirul Hussain, Gauhati University; Dr. Ajay Darshan Behera, Jamia Millia Islamia, New Delhi; Prof. Sikander Mehdi, Karachi University; Mr. Mohammad Humayun Kabir and Dr. Shaheen Afroze of BIISS; Prof. Dhruba Kumar, Tribhuvan University, Kathmandu; Ms. Kiran Habib, Sustainable Development Policy Institute, Islamabad.

I also drew a lot from a series of discussion meetings with Shri I K Gujral, Former Prime Minister of India, Prof Muchkund Dubey, former Foreign Secretary of India, Shri K.K. Bhargava, former Secretary General of SAARC and a number of widely known media persons including Dr. C Rajamohan, then with *Indian Express*, Ms. Lalita Pannikar then with *Times of India* and Ms. Parul Malhotra of CNN-IBN.

I also thankfully acknowledge the support extended by Prof. Yoshiko Ashiwa, Hitotsubashi University and Prof. David Wank, Sophia University in Tokyo. Much of this writing was done during my stint as a Visiting Professor at the Institute for the Study of Global Issues, Graduate School of Social Sciences, Hitotsubashi University, Kunitachi, Tokyo. I express my gratitude to the President of the Hitotsubashi University for all the facilities and support and the Joshui Guest House authority.

I must especially mention the patience, care and suggestions extended by Sabina, Kafal and Totola, the three priceless jewels in our huge family.
